# Apex Systems - Enterprise CRM Platform Proposal

*Enterprise-grade architecture with uncompromising security and scale.*

## 1. Executive Summary

Northwind Retail Group (the Client) is seeking to replace its legacy on-premises customer management system with a cloud-based Enterprise CRM platform. The solution must manage approximately 5 million customer records, support 2,000 concurrent users, integrate with the Client's SAP ERP and Mailchimp email platform, and meet SOC 2 Type II and GDPR requirements. The target implementation window is 12 months with a budget range of USD 400,000 to USD 900,000.

Apex Systems proposes a cloud-native, microservices-based CRM platform designed for enterprise scale. Our solution emphasizes architectural robustness, information security, and long-term scalability. We believe our platform is the strongest technical fit for the Client's requirement to support five million records and two thousand concurrent users.

Our proposal carries a premium total price of USD 840,000 and a moderate twelve-month delivery schedule, reflecting the depth of customization, security assurance, and enterprise integration work included.

## 2. Proposed Solution and Implementation Approach

Apex proposes a containerized, Kubernetes-based deployment with a headless REST/GraphQL API layer, a real-time analytics engine, and built-in AI-assisted lead scoring. The platform is designed to scale horizontally and to support the Client's SAP ERP and Mailchimp integrations through pre-built, governed connectors.

- Microservices architecture with independent scaling per workload.
- Event-driven data pipeline for real-time customer 360 views.
- Pre-built SAP ERP and Mailchimp connectors with reconciliation.
- Role-based access control and full audit logging.

## 3. Timeline, Team Structure and Milestones

Delivery is planned across four phases over twelve months.

- Dedicated team of 14 including an architect, security lead, and two integration engineers.
- Weekly steering committee and monthly risk review.

| Phase | Milestone | Month |
|---|---|---|
| Phase 1 | Discovery, security review and integration design | 1-2 |
| Phase 2 | Core CRM build and data model migration | 3-7 |
| Phase 3 | ERP and email integrations, UAT | 8-11 |
| Phase 4 | Production cutover and hypercare | 12 |

## 4. Price Table and Assumptions

Assumptions: pricing is valid for 90 days; excludes migration of legacy custom objects beyond the standard data model; premium 24/7 support is available as a separate annual add-on.

| Item | Amount (USD) |
|---|---|
| Software licenses (annual) | 320,000 |
| Implementation services | 380,000 |
| Integration (SAP + Mailchimp) | 90,000 |
| Training and change management | 50,000 |

| Item | Amount (USD) |
|---|---|
| Total | 840,000 |

## 5. Security, Compliance and Risk Controls

- SOC 2 Type II and ISO 27001 certified.
- GDPR compliance with data residency options in the EU.
- AES-256 encryption at rest and TLS 1.2+ in transit.
- SSO/SAML, MFA, role-based access, and full audit logs.
- Quarterly penetration testing by an independent firm.

## 6. Support Model, Experience and References

Standard support is provided during business hours; a premium 24/7 support tier with a 15-minute response SLA is available as an add-on.

- Twelve enterprise CRM deployments in retail and distribution.
- References available from three enterprise clients upon request.
- Average customer tenure of six years.
